

ETF Machinefabriek
ETF Ride Systems

History

Our roots are in the design, engineering and manufacturing of machines for the textile industry. In 1951 ETF built the first unit that detected material faults in threads at weaving looms. A big step forward at the time for textile production companies in the Netherlands. Soon Belgian and German textile companies wanted to use ETF machines as well to improve their production process. Nowadays ETF supplies floorcovering and non-woven production companies as well as wholesalers around the world with its machines.

Since the '80s we have also invested in the development of industrial automation for these production companies. Understanding both the technical demands and the IT implications for an interface with corporate systems, means we can create real added value for our customers.

Since the mid '90s both technical excellence and a deep understanding of industrial automation are translated very successfully into rides for the leisure industry.

ETF group Imaginative engineering

ETF group

Ruud Koppens

Whether you are looking for a machine or a ride, our imaginative engineering translates your vision into a smart solution. We excel in inventive ways of applying state of the art technology for a product that is tailor made to our customers' needs. We are building the most ingenious machines and rides, using over 65 years of experience in machine manufacturing and industrial automation.

Mission

We want all our products to make a positive contribution to your business objectives. Smart solutions with high up-time and low maintenance needs, substantiate this.

Proven Technology

- When you choose ETF, you get:
- High quality products, that prove their value in plants and parks around the world
 - A reliable business partner
 - And most important, a product tailor made to your needs

I would like to invite you personally to experience this yourself.

Ruud Koppens
President ETF Group

PORTAMASTER M 5635

ETF Machinefabriek

A broad range of machines installed World Wide.

ETF Machinefabriek designs and manufactures machines for:

- inspection
- cutting
- rolling
- packaging
- transporting
- sorting

of a wide range of different floor coverings and non-wovens.

Our machines are suitable for a multitude of utilizations and are designed to offer you an all-in-one solution.

With our machines we can also include smart customized process automation to decrease the number of operators to an absolute minimum.

PRODUCTION MACHINES

FINISHING MACHINES

LOGISTIC SYSTEMS

CUTTING AND MEASURING SYSTEMS

SPECIAL MACHINES

Your imaginative partner for enhancing your production process

Each machine concept is always adjusted and extended to our customers needs. We supply and service our machines worldwide. Working online and with qualified service engineers to solve any problem you may encounter, quickly and accurately.

Tailor made
Our skilled sales team will help you to specify your exact requirements and will help you to integrate the new addition seamlessly with your existing machines and processes. Our team of highly experienced engineers will then elaborate one of our proven concepts into the machine that will enhance your production process. Even when you ask the seemingly impossible, we will come up with a solution.

Quality and safety

ETF machines are all designed and installed under the highest quality and CE safety standards.

By choosing an ETF machine, you are assured of:

- Advanced technology for processing all kinds of materials
- High production speed and output
- High level of automation with a balanced number of operators
- A high level of reliability and safety
- User friendly machines
- Low maintenance requirements

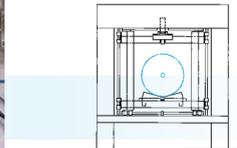

Would you like to know how we can help you optimizing your processes, please visit www.etf.nl for the contact details of our nearest sales support team.

PANORAMA PEDAL PLUS

ETF Ride Systems

In 1997 ETF decided to use its extensive experience in machine manufacturing and industrial automation to move into the leisure industry as well. Here we also combine mechanical and electrical engineering to develop rides that can be experienced by the whole family. With interactivity between passengers and the ride environment such as a target shooting system as an option.

Through the years we have installed a substantial number of different rides around the globe. Their reliable performance prove that ETF rides are an excellent choice and offer unbeatable possibilities in relation to their price!

MYSTIC MOVER

XPERIENCE MOVER TRACKBOUND

PANORAMA PEDAL

FLYING BIRDS

MULTI MOVER TRACK BOUND

Your imaginative partner for developing a ride that enhances the experience of your theme park, museum or event

Scope of rides

We offer a broad range of ride concepts. Trackbound or trackless; on the ground, elevated or suspended; all controlled electronically driven. All our ride concepts have the flexibility to integrate specific customer requirements. We offer high quality decorations to merge discretely into your parks backdrop or to represent a specific theme.

Creating an experience

To create a total ride experience you can choose to integrate passenger ride interactivity options like

speed control or directional control. For other enhancements including audio visual, decorations, etc. ETF works closely together with many partners in this field. We can also work with your partner or we can recommend a partner that suits your needs best.

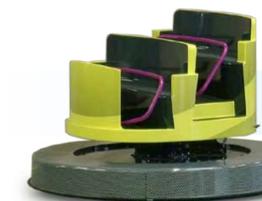

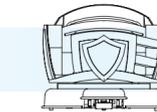

Quality and safety

ETF rides are all designed, produced and installed under the highest quality and safety standards, such as EN 13814 and for our unique vehicles we even have type approval by TÜV.

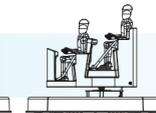

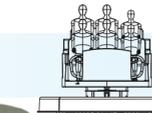

Would you like to know how we can help you optimizing your processes, please visit www.etf.nl for the contact details of our nearest sales support team.
